

Posturepaedia™ Pocket Sprung Seats

“New and Unique”

Posturepaedia™ Pocket Sprung Seats provide an Office Seating experience never before offered in the UK.

Posturepaedia™ Pocket Sprung Seating has been developed to offer an inexpensive solution towards providing support, comfort and core stability when using an office chair in any environment, should that be home, office call centre or control room. Developed for our Vertebral and Ergo Postural ranges, Posturepaedia™ seats use the same principal as that used in pocket sprung mattresses. They take your shape and provide support.

Cross Section of Posturepaedia Seat showing Pocket Springs and top layer of Memory Foam

As you move on the seat the 72 springs operate independently from each other to provide enhanced support, they follow your movements and mould to your shape providing exceptional weight distribution whilst at the same time assisting in the reduction of spinal compression and promoting core stability.

The seat has a Memory Foam top layer which enhances the level of comfort, helping to reduce fatigue and fidgeting. Posturepaedia™ is a truly innovative product, promoting Positive Posture, reducing fatigue and providing an office chair that is truly deserving the status of being Exceptional.

Due to the very nature of springs the Posturepaedia™ the seat will not collapse, unlike foams which over a period of time will flatten, reducing core support.

The pocket springs are **guaranteed** not to lose more than **3%** of their height in **10 years**.

Posturepaedia™ seats are particularly beneficial when used in **Call Centres, Control Rooms, 24 Hour Environments** as well as **General Office** applications. They provide a positive and affordable solution to workplace comfort and posture problems in a package that is designed to be functional with an extended longer working life.
